Skyline CMH Lighting

The Latest In Lighting Technology!

exhibiting solutions

High Output, Low Wattage: Skyline CMH Lights

Designed exclusively for Skyline, Ceramic Metal Halide (CMH) lighting offers many advantages over standard exhibit lighting:

Bright, Crisp Light Makes Your Exhibit Graphics 'Pop'

CMH lights are white and bright! With CMH, your graphics and message will always stand out and look their best.

Cut Electrical Costs by up to 80%

Electrical power at trade shows can be expensive and CMH can save you money. One 70w CMH light is almost twice as bright as a 200w halogen light, meaning you require fewer fixtures and fewer watts to light your exhibit.

Fully Approved In Las Vegas!

Skyline CMH lights are fully approved for use in Las Vegas venues that currently ban most halogen lights. With Skyline CMH lights, you'll never have to scramble to find alternate lighting in the #1 trade show destination city in North America.

Environmentally Friendly

CMH lights require 1/5 the power of halogen lights and contain none of the mercury found in compact fluorescent bulbs.

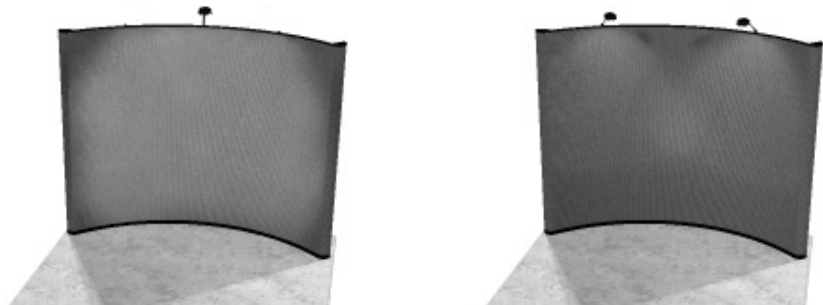

Because CMH lights require fewer fixtures than halogen or incandescent lights, you can save hundreds of dollars every show on electricity and I&D costs.

With Skyline CMH lights (top), you can light brighter with half as many fixtures as halogen (bottom).

CMH is Perfect For Exhibits of any Size

Realize savings and ease in all kinds of exhibits and all sizes. A single Skyline CMH fixture will light a full 10' display, lighting a greater surface area than two halogen fixtures.

A single 70-watt Skyline CMH light provides more lighting than two 200-watt halogen lights.

Skyline CMH Lighting

CMH: Engineered for Better Exhibit Lighting

High Output, Low Wattage

CMH gives you the same light output as two 200-watt halogen lights. That's just 70 watts opposed to 400 watts!

Save Hundreds on Show Electric

Using CMH lighting on larger exhibits can drastically reduce show electricity costs. An exhibit using 20 200-watt halogen lights (4,000 watts) would require a minimum of 3 15-amp circuits.

CMH provides the same light with half the fixtures using only 700 watts, requiring only 1 10-amp circuit.

Durable Long-Life Bulbs

CMH bulbs have a 15,000 hour rating and are more durable than halogen.

Mounts to Skyline Systems

CMH lights are designed to attach to a variety of Skyline modular

and portable exhibit systems.

Touch-Safe Bulb Installation

Touching bulbs upon installation will not shorten bulb life or burn your skin.

Daisy-Chain up to 10 Lights

Power cables have a 10-light capacity so there are fewer cords, easier wire management and fewer outlets required.
